Professional Summary

Data Engineer with 5 years of experience architecting scalable ETL/ELT pipelines and cloud infrastructure (Azure, AWS, Databricks). Proven ability to deliver high-quality, reliable data for advanced analytics and machine learning while aligning technical solutions with cross-functional revenue operations.

Professional Experience

Data Engineer | Omnicom

Apr 2025 – Present

- **Architected and maintained scalable data pipelines (ETL/ELT)** using Python, SQL, and PySpark, ensuring data integrity and streamlined cross-functional data delivery for advanced analytics.
- **Spearheaded cost-effective cloud migration initiatives**, transferring data ingestion jobs to AWS Glue and orchestrating them via Airflow to optimize pipeline performance, cost, and reliability.
- **Implemented Medallion Architecture (Bronze, Silver, Gold)** across data lakes to establish robust data governance, security, and compliance while providing high-quality datasets to downstream teams.
- **Optimized existing complex data architectures**, significantly reducing processing runtimes and improving cluster resource utilization across multiple diverse data sources.
- **Nissan Data Platform:** Optimized legacy Airflow ETL pipelines, slashing runtime by 75% (80 to 20 minutes) through comprehensive codebase refactoring. Engineered the migration of Airbyte jobs to AWS Glue and designed an end-to-end Medallion pipeline for YouGov data, empowering the Marketing Science team with analysis-ready datasets.
- **(ARD) Agile Release Delivery:** Built and maintained data pipelines ingesting comScore and Lotame audience data across 45+ markets, delivering quarterly and monthly releases (US and non-US) to the Omni Dashboard, enabling the Marketing agencies to build audience and design data-driven marketing campaigns for their clients. Built an Airflow-based health-check framework monitoring audience, storage, and compute health, and extended an existing regression test pipeline with automated Teams alerts on test failures for rapid issue detection.

Data Engineer | Zebra Technologies

Jun 2021 – Apr 2025

- **Designed and maintained scalable data pipelines** on Azure, integrating REST APIs and real-time sources to prepare structured big data for advanced analytics and machine learning workflows.
- **Leveraged Databricks Workspace, Databricks SQL, and Delta Lake** for large-scale, distributed data processing using PySpark, reducing processing time by 15%.
- **Automated ETL workflows** using Airflow and Azure Databricks, improving operational efficiency by 18% and establishing best practices in MLOps and cloud-based deployment.
- **Enforced data governance and integrity** by implementing automated validation, cleansing, and anomaly detection across enterprise data lakes and warehouses.
- **DataOps Utilities:** Reduced Databricks compute costs by 20% by building a REST API-based utility to track per-job runtime and usage, enabling data-driven compute sizing across workflows for 15+ client Databricks workspaces.
- **Input Output SFTP Management (IOSM):** Designed and built an SFTP monitoring tool covering inbound data ingestion and outbound file delivery to data science teams and clients, proactively alerting DataOps on SLA-critical files with 6-hour early warnings and validating file delivery at destination paths, as measured by an 80% reduction in manual monitoring effort, enabling faster SLA issue resolution before client impact.
- **Bimbo Bakeries (BBU):** Co-led migration of end-to-end AWS-SQL data pipelines to Azure Databricks DLT Pipelines, implementing SCD Type 2 logic using PySpark and SQL for data manipulation and automation.
- **Bimbo Canada (BC):** Designed, scheduled, and maintained comprehensive ETL pipelines using Airflow, PostgreSQL, and AWS S3, integrating modern data stack tools.
- **GlaxoSmithKline (GSK):** Architected pricing engines that analyzed 50+ markets, designing pricing strategies worth \$100M+ in annual revenue with 92% predictive accuracy.

Technical Skills

- **Languages & Libraries:** Python, SQL, PySpark, Pandas, NumPy, Bash
- **Databases:** PostgreSQL, MySQL, Amazon RDS, Single Store (S2), BigQuery, AWS Athena, Starburst
- **Orchestration:** Airflow, MWAA, dbt, Airbyte, Databricks Workflows, N8n
- **Data & Cloud Infrastructure:** ETL/ELT, Data Modeling, Databricks, Delta Lake, Azure Blob, AWS S3, AWS Glue, GCP Compute, Docker, CI/CD, GitHub Actions
- **Tools & Analytics:** REST APIs, Jupyter, Tableau, Apache Superset, Grafana
- **AI/ML & Agentic Systems:** RAG, MCP, LLM Agents, LangChain, LLM APIs

Education

Bachelor of Engineering | Computer Science
Chandigarh University, Punjab

Jun 2017 – Jun 2021
